
About the Programme

Can I participate in this and other flexibility programmes?

By participating in this programme, you'll need to agree **not to participate in other flexibility programmes** offered by different providers.

This ensures there's **no overlap or conflicting control signals** between systems.

How long will this run for?

It's a **permanent scheme**; you're welcome to join at any time once you meet the eligibility requirements.

Why do I need to grant remote control access to my inverter?

To deliver energy to the grid automatically, your system must be able to **respond to dispatch signals in real time**.

This requires **remote control of your inverter**, allowing us to export power during scheduled grid events without any manual input from you.

All access is **secure**, limited, and only used during authorised **grid service events**.

Is this compatible with Octopus or other intelligent tariffs?

Octopus runs its own **Grid Services** scheme; see their website for more details.

However, in future releases, **Octopus customers will be able to sign up for carbon-credit rewards**, so check back soon!
