
Connecting Using The 'Home' Option In The App

The “Home” option allows you to monitor your inverter directly over your local Wi-Fi.

1. Make sure your app is up to date.
2. Open the app and go to ☰ → **Settings** → **Local Monitoring**.
3. Tap **Scan for Inverter** (ensure you're on the same Wi-Fi as the inverter).
4. Select your inverter and connect.

Important:

- The Home option only works if your phone is on the same Wi-Fi access point.
- Mesh networks or extenders may prevent connection.

Troubleshooting:

- Enable location services and local network permissions in your phone settings.
- If still unable to connect, assign a static IP to the inverter via your router.

When to Contact Support:

If local monitoring fails after trying all steps.
