# GivEnergy Firmware Update Guide

## Changelog & Latest Software

For a list of up-to-date firmware and changelog, please see: [Firmware Files](#)

## Remote Online Firmware Updates

The first method to try is the remote update; this will attempt to update both inverter and batteries.

1. Log onto the online GivEnergy portal and sign in with your username/password: <https://www.givenergy.cloud>
2. When signed in, go to **My Inverter Card** on the side bar.
3. In the **My Inverter** section, go to **Software**.
4. If your inverter is running the latest firmware, *no option for updates* will be available.
5. If an update is available, press **Update**.
6. This will now take **5–30 minutes** to update; please do not turn the system off during this.
7. If after **1 hour** the system is still saying *updating*, please restart the inverter.
